PROFESSIONAL SUMMARY

Junior Node.js Backend Developer with hands-on experience developing RESTful APIs using Node.js, Express.js, and MySQL. Skilled in JWT authentication, role-based authorization, database operations, request validation, and real-time communication using Socket.IO. Built three practical backend projects covering e-commerce, ride-hailing, and blog management.

TECHNICAL SKILLS

- Programming Language: JavaScript (ES6+)
- Backend Development: Node.js, Express.js, RESTful APIs, Middleware
- Database: MySQL, SQL, mysql2
- Authentication & Security: JWT, bcrypt, Role-Based Authorization, Helmet, CORS
- Validation & File Handling: express-validator, Multer
- Real-Time Communication: Socket.IO
- Tools: Git, GitHub, Postman, npm, XAMPP

PROJECTS

E-Commerce REST API

Technologies: Node.js, Express.js, MySQL, JWT, bcrypt, express-validator

- Developed a RESTful API for an e-commerce application with user authentication and profile management.
- Implemented admin-controlled product and category management, shopping cart operations, and order creation and cancellation.
- Applied JWT authentication, password hashing, request validation, and centralized error handling.

GitHub: github.com/ahmed-softwar/ecommerce-api

Real-Time Ride-Hailing API

Technologies: Node.js, Express.js, MySQL, Socket.IO, JWT, bcrypt, express-validator

- Developed a ride-hailing API supporting Rider, Driver, and Admin roles with JWT authentication and role-based authorization.
- Implemented trip lifecycle management, including creation, acceptance, starting, completion, and cancellation, with ownership and status checks.
- Integrated Socket.IO for real-time trip status notifications and driver location updates.
- Implemented driver status management, location updates, paginated trip listing, and request validation.

Blog REST API

Technologies: Node.js, Express.js, MySQL, JWT, bcrypt, express-validator, Multer

- Developed a RESTful API for blog and user management with JWT authentication and Admin/User authorization.
- Implemented blog CRUD operations with ownership protection, allowing owners or administrators to manage posts.
- Added title-based search, pagination, and image uploads using Multer with file type and size restrictions.
- Implemented user profile management, request validation, and centralized error handling.

EDUCATION

Higher Technological Institute – Beni Suef
Bachelor's Degree in Computer Systems and Development Technology
Graduation Year: 2026 | Grade: Very Good

LANGUAGES

- Arabic: Native
- English: Intermediate
